

SEED GERMINATION

- HOME USE -

Material

1. Cannabis Seeds
2. Clean Cloth / Paper towel
3. Plastic Bag
4. Water
5. Tweezers (optional)

TIPS

- *Ideal temperature for germination
19 to 24 degrees Celsius*
- *Minimize the amount of handling of seeds
for best results*
- *When transplanting seeds, place 1-3cm deep in
the medium*

SEED GERMINATION

- HOME USE -

Process

1. Clean your hands and work area.
2. Using tap or bottled water, wet the clean cloth (or paper towel), ensuring it is damp not soaking wet.
3. Using clean hands or tweezers carefully place seeds in half of the damp cloth, leaving about 1-2cm between each.
4. Carefully fold over the other half of the cloth onto the seeds and seal in a plastic bag.
5. Place the plastic bag in a warm, dark place
6. Carefully check seeds every 12-24h
7. Seeds are ready to be planted when a root 2-5mm is visible, this may take 1-5 days
8. Using clean hands or tweezers carefully place seeds root down in your chosen medium (soil, coco, ect)
